Item # Power Series LP, Low Profile Automatic Entry Level Turntable Stretch Wrapper With Clamp Cut

Low Profile Automatic Entry Level Turntable Stretch Wrapper With Clamp Cut

The POWER-SERIES is part of a robust line of stretch wrapping equipment designed to maximize stretch film usage while ensuring the very best load unitization. All ARPACSTRETCH™ equipment is constructed with heavy-duty reinforced structural steel and finished with non-corrosive Steel-It paint, to guarantee years of reliable wrapping. The POWER-SERIES is manufactured in the USA and sold through our nationwide distributor network.

The POWER-SERIES is the efficient stretch wrapping solution for all material handling environments. This automatic entry level turntable stretch wrapper is completely accessible to forklift operators without getting off the truck. The POWER-SERIES may be purchased with the WRAP-N-WEIGH® feature that combines wrapping and weighing into one operation, by integrating precision controls into the turntable base. The POWER-SERIES is available in high and low profile.

Mode of Operation

The forklift operator sets the pallet onto the turntable of the POWER SERIES. The operator then pulls the lanyard cord to begin the wrap sequence. The film is automatically attached, the pallet is wrapped, and the film is automatically cut and the tail is wiped to the pallet. Once the wrapping sequence is completed, the wrapped load is removed from the turntable platform by forklift. After the wrap zone is clear, a new load is positioned and the cycle is repeated.

FEATURES

- Remote lanyard to start cycle
- Adjustable top and bottom illuminated LED wrap counters from 0-7
- Magnetic proximity switches in place of mechanical limit switches
- Cycle pause feature and turntable jog control
- Top film over wrap control feature (TOC)*
- Electronic film tension adjustment control on control panel
- Independent up and down film carriage controls with jog up/down switch
- Manual jog control for turntable
- Upgraded photo eye for automatic load height sensing of all color loads
- Micrologix 1200 PLC Control System using UL/CSA approved components
- NEMA 1 electrical enclosure

Guarding and Finish

- Film carriage is mounted to the machine tower on the opposite side of the operator control panel eliminating the possibility of the moving carriage coming into contact with the machine operator.
- No exposed chains, sprockets or machine drive mechanisms.
- Film carriage door disables the machine when open preventing the carriage rollers or the machine from starting when the operator is changing the film roll
- The Powder Coated paint system is standard on all Arpac Stretch equipment. It is USDA-approved for use in the food processing and handling industry where incidental food contact may occur.
