

Certified Reference Materials

FOR REFRACTOMETERS AND POLARIMETERS

**Bellingham

a xylem brand

Regular verification of laboratory instrumentation is of primary importance in a modern manufacturing facility, not only for reasons of quality control but also as an assurance of plant efficiency.

Depending on the instrument type, application and traceability requirement, a choice can be made from a number of Certified Reference Materials offered by Bellingham + Stanley that may be used to verify almost any make of refractometer or polarimeter. All CRMs are manufactured to the highest standards and are certified in accordance with EN ISO/ IEC 17025:2005.

The United Kingdom Accreditation Service (UKAS) is one of the signatories to the International Laboratory Accreditation Co-operation (ILAC) Arrangement for the mutual recognition of calibration certificates.

Please contact Bellingham + Stanley or your local distributor for advice on selecting the correct CRM for your particular application.

Features:

- Low Brix water based refractometer CRMs
- High value oil based refractometer CRMs
- Sucrose Solution supply contracts
- Quartz Control Plates for Polarimeters
- 12-months validity on most products!

Bellingham + Stanley Ltd., a UKAS accredited calibration laboratory number 0834, offer a number of different calibration materials for verifying and calibrating refractometers, traceable to NIST and ICUMSA. The standards are made to the highest quality and are supplied with certificates in either single or multi-pack formats. Values at temperatures other than 20°C¹ are available in RI and °Brix from a table supplied with the fluid or via the Technical Centre at www.bellinghamandstanley.com

AG Fluids

Ideal for use where verification/calibration at the lower end of the °Brix or refractive index scale is required. AG fluids are despatched with at least 12-months validity and when purchased as a 'multi-pack' offer excellent value for money as the 'per bottle shipping cost' is significantly reduced.

Calibration Oils

Primarily used to verify instruments that operate over a wide refractive index range and for specific applications such as within the edible oil industry, careful consideration to temperature must be adopted when using calibration oils due to their high coefficient. For optimum performance, temperature control should be applied to the instrument being verified or alternatively, use of the RI/°C table/calculator should be made¹.

Sucrose Solutions

Sucrose Solutions are an extremely easy to use medium for verifying and calibrating refractometers measuring in the °Brix scale, as no special consideration is required when testing instruments at ambient temperature fitted with ATC.

Sucrose Solutions are typically supplied in 15ml plastic dropper bottles complete with Certificate of Calibration but may also be supplied in a larger quantity for high volume users or for customers wishing to verify the performance of density meters operating in the °Brix scale.

The Certificate of Calibration provides values for sucrose in %weight/weight, °Brix and refractive index as well as giving detail about traceability and uncertainty.

Sucrose Solutions - Supply Contracts

As sucrose solutions have a limited shelf life of 6-weeks, they must be purchased at the time of requirement. If a frequent calibration regime is operated, the administration cost of issuing purchase orders every time can be relatively high. Many users therefore choose to take out a supply contract on a single order that ensures trouble free regular delivery over a twelve month period.

“RI Equivalent” Aqueous Urea Solution

Users of refractometers for the testing of Diesel Exhaust Fluids require some specific calibration materials. Manufacturers need an extremely high accuracy CRM to comply with ISO 22241, whilst users in the field need longevity of product.

Bellingham + Stanley offer two product types based on existing fluids that have an equivalent refractive index to 32.5% Urea.

Code	Type	Value (RI)	Vessel	Volume	Uncertainty (RI: k=2)	Shelf Life
18-50 ⁵	SS-AUS	1.38290	Plastic	15ml	±0.000011	6-weeks

Note:

1. UKAS Certification is valid at 20°C & 589.3nm only. For use at other temperatures, please refer to the calibration/technical sections of www.bellinghamandstanley.com
2. Typical refractive index @ 589.3nm & 20.0°C.
3. Equivalent °Brix value @ 589.3nm & 20.0°C. °Brix values greater than 85 are extrapolated from the relationship given in ICUMSA SPS-3 (2000) Equation 2.
4. All quoted values for calibration oils are subject to minor batch to batch variations.
5. Due to its relatively short shelf life and limited application, SS-AUS is only available on a Supply Contract basis.

Quartz Control Plates

Bellingham + Stanley offer a choice of Quartz Control Plates (QCP) for verifying and calibrating polarimeters. QCPs are made to the highest standard and may be supplied with an optional Certificate of Calibration, showing traceability to PTB. When used with an ADP polarimeter manufactured by Bellingham + Stanley, a thermal block may be used to provide mechanical contact to the instrument's external temperature sensor, allowing the use of quartz temperature compensation for added accuracy.

As part of Good Laboratory Practice, it is recommended that Quartz Control Plates are sent to our UKAS laboratory at regular intervals determined by the user's own Standard Operating Procedure for inspection and recertification.

For details of QCP combination box sets, please visit our website.
