### Alginex

Pack size	Application rate
1 L	Use 1 -4 pints (diluted) per bbl

#### Usage Information

1 pint of **Alginex 287** should be diluted with 287 pints cold brewing liquor to make 1 barrel of ready-to-use auxiliary finings. The rate of use of this solution will vary considerably but will normally be in the range 1 to 4 pints of per barrel. It is recommended that addition rates are determined by laboratory and brewery scale trials.

It is recommended that **Alginex 287** is added and thoroughly mixed with the beer prior to isinglass finings addition, though successful fining has been achieved using the reverse procedure. ***It must be stressed that Alginex 287 and isinglass finings are to be added separately.***
