

LALLEMAND INC.

Blagnac, 21th of December, 2009.

CERTIFICATION FOR THE ABSENCE OF GENETICALLY MODIFIED MATERIAL

Bacterial cultures and bacterial products

We hereby certify that the commercial cultures manufactured by Lallemand Inc. and its subsidiaries are all propagated from microbial strains rigorously checked and analysed for their identity, purity and viability. According to our historical files and analytical data, we have no evidence that any of our commercial strains kept in our culture collection and produced on our premises has ever been genetically modified.

Ingredients used in the production of our products have either received certification from our suppliers affirming they have been manufactured in such a manner that genetically modified organisms are not incorporated in their production and/or have tested negative by Polymerase Chain reaction (PCR) testing.

Based on the information we received from our suppliers and current European legislation (Directive 2001/18/EC and Regulation 2003/1829/EC), Lallemand Inc products are considered to be non-GMO products.

Antoine Fleury
Deputy Quality Assurance Manager
Lallemand Inc, Specialty products division.
