

SWECO®

PARTS / MEDIA SEPARATOR

LATEST INNOVATION IN FINISHING MILL TECHNOLOGY

Sweco's new Parts / Media Separator for 10 cubic feet Sweco Finishing Mills has been designed to simplify the removal and separation of the parts from the media within the machine. No longer does an operator need to either manually remove the parts from the machine at the end of the process or remove both the media and the parts from the machine, separate them on an auxiliary separator, and then put the media back into the machine. Both of these processes are extremely time consuming and labor intensive. The new Sweco Parts / Media Separator allows for easy separation of the parts and the media without removing everything from the machine. The unloading of the finished parts is reduced from between 60 to 90 minutes to anywhere from 5 to 15 minutes. A substantial amount of time and money can be saved by using the Parts / Media Separator.

Take The Hands-Off Approach

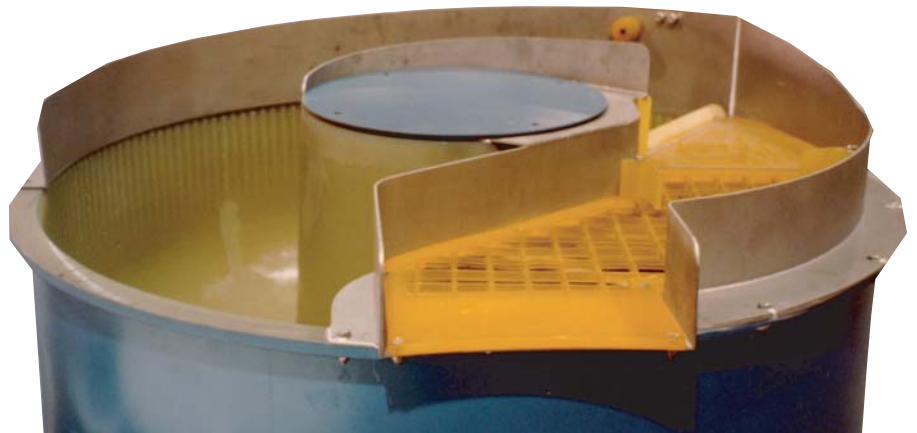

BEFORE

AFTER

Benefits of the Parts / Media Separator

- Provides a hands-off approach to the process by automatically separating the parts from the media
- Fits onto existing FM10 machines
- Increases capacity of the machine
- Reduces labor costs
- Increases productivity of operators
- Less downtime on the machine
- Provides a safer work environment
