

ABCO DEWATERING TRUCK (DT)

Reduce Disposal Cost • Reduce Fuel Cost • Reduce Mileage & Truck Wear & Tear

Process 20 or More Septic Tanks Before Having To Unload!

How it Works...

The ABCO DT vacuums in septic sludge and conditions it with a polymer. The polymer causes the solids to bond together which are then separated from the liquid via the onboard ABCO filter. The liquid is returned and the solids are held on the truck, reducing the take away volume up to 90%.

Also...

- For failed systems the ABCO DT can be used as a conventional pumper truck.
- The ABCO DT is available with a powered hose reel system.
- The ABCO DT is available with a high pressure jetting system.
