

Bond-Rite® REMOTE

Continuous Ground Loop Monitoring with visual indication.

The precision and reliability of the **Bond-Rite® REMOTE** provides enhanced safety and security by continuously testing the connection of the clamp to the container or other conductive item of plant in a complete loop made through the designated grounding point.

[Inquiry > Click here to submit a product related query or a request for quotation.](#)

The Bond-Rite REMOTE indicator station houses the ground loop monitoring circuit and a bright green LED which pulses continuously when it detects that the resistance between the equipment to be grounded and the site's verified earth ground (e.g. copper tape) is 10 ohms or less.

Once connected the Bond-Rite REMOTE continuously monitors the resistance of the circuit between the equipment and the verified ground point (e.g. wall-mounted bus bar).

The pulsing green LED provides process operators with a continuous visual reference point that enables them to monitor the ground status of equipment at risk of accumulating static electricity and discharging static sparks.

The standard GRP enclosure is static dissipative and suitable for general processing environments. The stainless steel enclosure (SS 304) is designed to cater for hygienic or corrosive environment specifications.

Both enclosures provide an IP 66 degree of ingress protection and are suitable for both indoor and outdoor installation.

The Bond-Rite REMOTE can be powered with an intrinsically safe 9V battery (included) or an external 230/115 V AC power supply which can power up to 10 individual indicator stations.

The Bond-Rite REMOTE is an ideal solution for applications and installations where interlocks with the process are not possible.

Bond-Rite REMOTE
Static dissipative GRP enclosure

Typical Applications

- > Filling and dispensing to/from metal containers, including drums, waste drums, mixing vessels.
- > Grounding equipment used in mixing and blending operations.

Bond-Rite® REMOTE (EP)

For process applications that require grounding for more than 6 hours per day, the **Bond-Rite REMOTE EP** (EP = Externally Powered) utilises 230 V AC or 115 V AC mains supply / line power to power the monitoring circuit of each indicator station.

The external power supply can be located in both the 'hazardous' (Zone 2/22 - Div.2) and 'non-hazardous' areas, with the indicator stations mounted in the zoned / HAZLOC area (Zone 0 / Div.1) or lower.

When used in conjunction with the Newson Gale Universal power supply, up to 10 **Bond-Rite REMOTE** indicator stations can be powered simultaneously. This enables users to actively monitor up to 10 items of plant equipment at risk of electrostatic charging (e.g. drums) independently of each other.

An additional advantage of this configuration is that the external power supply itself can be installed within the hazardous area. For more detailed information please refer to the ATEX / IECEx and cCSAus technical specification pages.

Bond-Rite REMOTE
Stainless steel enclosure.

Features and Benefits

- > **Highly visible LED** housed in wall mounted enclosure ensures operators know when a low resistance connection is achieved with potentially charged equipment.
- > **Tungsten carbide teeth** bite through product deposit build up, rust & drum coatings to ensure proper bonding connections are made.
- > **Stainless steel clamps** designed to withstand use in tough chemical processing and industrial environments.
- > **10 ohms loop resistance** monitoring compliant with international Recommended Practice*.
- > Indicator station mounted **stowage pin** provides operators with a location to return the grounding clamp when the operation is finished.

Ideal for multiple drum filling applications

*IEC 60079-32, "Explosive atmospheres: electrostatic hazards, guidance".

*NFPA 77, "Recommended Practice on Static Electricity".

The Bond-Rite® REMOTE forms part of the Bond-Rite® range of Static Grounding and Bonding Equipment available from Newson Gale.

Bond-Rite® REMOTE (GRP)

Technical Specification

Bond-Rite REMOTE [GRP] - Battery Powered and Mains Powered	
Ingress Protection	Type 4X (IP 66)
Ambient Temperature Range	-40°F to +140°F (-40°C to +60°C)
Operational Ground Resistance	Nominally ≤ 10 Ohm
Indicator Lamp	LED: 1 green (Ground / Earth connection healthy)
Battery Supply option	9 V Lithium-Manganese Battery (supplied with unit)
Power Supply option	Newson Gale Universal Power Supply
Enclosure Material	Glass Reinforced Plastic (carbon loaded)

Bond-Rite® REMOTE

Equipment Options

Newson Gale supplies a range of product options that enhance the control and general safety of transfer processes and aid engineers with system installations and routine system service checks.

Cable length options

Equipment specifiers can order the Bond-Rite REMOTE with 2-pole Cen-Stat cable on standard spiral lengths of 10 ft. (3 m), 16 ft. (5 m) and 32 ft. (10 m) of cable.

The spiral cable provides effective retractability when the clamp is not in use, ensuring the cable is neatly stowed and safely out of the way.

Cen-Stat cable supplied with male and female in-line Quick-Connects.

Universal Resistance Tester

The URT is designed to provide installers and maintainers of Newson Gale **Earth-Rite®** and **Bond-Rite®** static grounding systems with a means of regularly testing the grounding settings for their system on a routine basis.

Periodic testing with the URT verifies that the grounding system's **GO/NO GO** settings are working in compliance with the recommendations of:

NFPA 77: "Recommended Practice on Static Electricity."

IEC 60079-32-1: "Explosive atmospheres. Part 32-1: Electrostatic hazards, guidance."

The easy to use tester consists of a pair of rotary switches that enable a competent electrical person to check the resistance level at which the grounding system should be working and conduct a **PASS / FAIL** test at the required setting.

Bond-Rite® products that can be tested with the URT include:

- > Bond-Rite® CLAMP
- > Bond-Rite® EZ
- > Bond-Rite® REMOTE

Universal Resistance Tester
Product Code: URT.
