Benefits

With **AfiFree 155** installed in the milking parlor you have immediate, hands on information about the animal at the milking point.

Animal Data

The animal's number is displayed after its identification; animal's milk weight is display when milking starts.

Kick-Off Alert

When yields are lower than expected.

Health Codes

Alerts for problematic animals or those requiring special attention.

AfiFree 155 is an integral component of the AfiShepherd management system that collects **vital information** automatically and **maximizes** small animal **herd production**.

Accurate and immediate data

Now you can make practical decisions based on accurate animal health and milk quality information with AfiFree 155 by AfiMilk. The AfiFree 155 unit features a measuring chamber and an electronic control display. The user-friendly units are installed at a comfortable working height, within easy sight and provides convenient operation at each milking point in the parlor.

Smart, Simple, Compact

AfiFree 155 helps you maximize profits by giving you alerts and information on-the-spot, at the source. The user-friendly device has two operational buttons. A clear 4 digit display provides you with animal data, health codes and kick off alert. AfiFree 155 connection with the AfiShepherd management system enables hands-on and accurate data for intelligent decision-making.

*ICAR – International Committee for Animal Recording
AfiFree is the first milk meter approved by ICAR for both sheep and goat herds.

Description

- AfiFree 155 consists of a small volume measuring chamber and an electronic display unit, installed at the milking point, within view and easy operational position
- Convenient plug-in connector to computer network
- Chamber is cleaned with a minimum volume of water; built to withstanding boiling water
- The unit is solid state; no moving parts reduces maintenance to a minimum
- Simple push-button operation
- 4 digit display
- Optional configuration as a stand-alone unit
- Future options for extended comprehensive display
- Optional installation in swing over parlors

Main Features

- Highly accurate free-flow measurements in 10 cc increments
- Measures milk yield, electrical conductivity, milking time and flow rate
- Milking stops automatically when there is a drop in the milk flow to prevent over-milking

Operational Features

- Easy visual alerts – bright green LEDs for milking status; bright red for critical alert
- Push button to cancel Automatic Cluster Removal
- 'Cluster Removal' and 'Vacuum Shut-off' supported by two separate outputs
- 'External Start' and 'Swing Over Side Detector' supported by two separate inputs
